Sriya Pothula

Aldie, VA | 703-600-9515 | sriyasriya569@gmail.com | LinkedIn

Professional Summary

AI Engineer with experience building end-to-end machine learning systems, RAG pipelines, and scalable data platforms using Python, SQL, and cloud technologies. Proven ability to design production-grade data workflows, semantic search systems, and AI-powered applications, with a strong foundation in NLP, distributed systems, and backend engineering.

Technical Skills

Python | SQL | Streamlit | NLP | RAG | LLMs | OpenAI API | XGBoost | FAISS | SAP | AWS | Git | Databricks | ServiceNow | Power BI | Snowflake | MinIO | Postgre SQL | Semantic Search | PySpark | ETL Pipelines | Embedding

Professional Experience

ALFA8 LLC **August 2025 – December 2025**

AI Engineer Intern *Fairfax, VA*

- Built a full-stack AI platform using **Python, PostgreSQL, MinIO, and Streamlit**, enabling ingestion and querying of multi-source mental health datasets, improving **data accessibility for non-technical users.**
- Engineered an end-to-end **RAG pipeline (embeddings, vector search, LLMs)** that delivered **grounded, context-aware answers**, increasing retrieval accuracy and usability of large-scale datasets.
- Designed and implemented **semantic + keyword search systems** using **pgvector and embedding models**, improving dataset relevance ranking and user query performance.
- Developed scalable **data ingestion and indexing pipelines**, reducing manual dataset processing and enabling **real-time querying and visualization workflows.**

Top Marble & Granite LLC **August 2025 – December 2025**

Business Intelligence Intern *Fairfax, VA*

- Built interactive dashboards using **Power BI and Snowflake**, enabling real-time tracking of sales, inventory, and demand, contributing to a **33% increase in revenue.**
- Designed optimized **SQL data models and ETL workflows**, improving reporting efficiency and reducing manual data aggregation efforts.
- Delivered actionable insights through **data analysis and visualization**, directly influencing pricing, inventory planning, and marketing strategies.

Infosys **March 2021 – December 2023**

Senior SAP Data Engineer *Remote*

- Developed **Python and SQL automation workflows** for enterprise systems, reducing manual reporting and validation effort by **~30 hours per week.**
- Supported arge-scale production systems across **SAP SD, TM, and S/4HANA**, resolving **P1/P2 incidents via ServiceNow** and maintaining high system reliability for global clients.
- Analyzed and debugged complex workflows (freight, order processing, shipment systems), improving **issue resolution speed and operational efficiency.**
- Collaborated with engineering teams on **backend debugging (ABAP coordination) and release validation**, ensuring stable deployments across development, testing, and production environments.

Technical Project

Clinical Question Answering System (*Python, SBERT, ClinicalBERT, T5, FAISS, NLP Pipelines)*

- Built an NLP-based question answering system using **SBERT retrieval and transformer-based models (ClinicalBERT, T5)**for accurate medical responses.
- Implemented **FAISS vector indexing** to enable fast and scalable semantic retrieval.

Education

Master of Science in Data Analytics Engineering, *George Mason University* **December 2025**

Bachelor of Science in Electronics & Comms Engineering, *SRKR Engineering College* **May 2020**
